

Saratoga CCR 2023

Is my water safe?

We are pleased to present this year's (2023) Annual Water Quality Report (Consumer Confidence Report) as required by the Safe Drinking Water Act (SDWA). This report is designed to provide details about where your water comes from, what it contains, and how it compares to standards set by regulatory agencies. This report is a snapshot of last year's water quality. We are committed to providing you with information because informed customers are our best allies.

Do I need to take special precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Water Drinking Hotline (800-426-4791).

Where does my water come from?

The Towns drinking water is supplied by five groundwater wells located approximately three miles east of the Town limits. The five wells range in depth from 305 feet to 430 feet below ground surface and are completed in the North Park Formation.

Source water assessment and its availability

Information and questions on the Towns source water can be obtained at Town Hall.

Why are there contaminants in my drinking water?

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hotline (800-426-4791). The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity: microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife;

inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses; organic Chemical Contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems; and radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

How can I get involved?

The Saratoga / Carbon County Impact Joint Powers Board meetings are held at 6:00 PM every second Wednesday of the month at the Platte Valley Community Center. Members of the public can attend and ask questions and receive information regarding the Towns Public Water System during these meetings.

Description of Water Treatment Process

Your water is treated by disinfection. Disinfection involves the addition of chlorine or other disinfectant to kill dangerous bacteria and microorganisms that may be in the water. Disinfection is one of the major public health advances of the 20th century. The Town of Saratoga's drinking water system is only treated with chlorine.

Water Conservation Tips

Did you know that the average U.S. household uses approximately 400 gallons of water per day or 100 gallons per person per day? Luckily, there are many low-cost and no-cost ways to conserve water. Small changes can make a big difference - try one today and soon it will become second nature.

- Take short showers a 5-minute shower uses 4 to 5 gallons of water compared to up to 50 gallons for a bath.
- Shut off water while brushing your teeth, washing your hair and shaving and save up to 500 gallons a month.
- Use a water-efficient showerhead. They're inexpensive, easy to install, and can save you up to 750 gallons a month.
- Run your clothes washer and dishwasher only when they are full. You can save up to 1,000 gallons a month.
- Water plants only when necessary.
- Fix leaky toilets and faucets. Faucet washers are inexpensive and take only a few minutes to replace. To check your toilet for a leak, place a few drops of food coloring in the tank and wait. If it seeps into the toilet bowl without flushing, you have a leak. Fixing it or replacing it with a new, more efficient model can save up to 1,000 gallons a month.
- Adjust sprinklers so only your lawn is watered. Apply water only as fast as the soil can absorb it and during the cooler parts of the day to reduce evaporation.
- Teach your kids about water conservation to ensure a future generation that uses water wisely. Make it a family effort to reduce next month's water bill!
- Visit <u>www.epa.gov/watersense</u> for more information.

Source Water Protection Tips

Protection of drinking water is everyone's responsibility. You can help protect your community's drinking water source in several ways:

- Eliminate excess use of lawn and garden fertilizers and pesticides they contain hazardous chemicals that can reach your drinking water source.
- In 2020 the Town, with assistance from the Wyoming Association of Rural Water Systems, adopted a Source Water Protection Plan. The plan is an active document that evaluates potential threats to the Towns source water (well field), and established actions that can be taken to evaluate potential threats, and corrective actions that could be implements to protect the Towns source of drinking water. Potential contamination sources to the Towns water system is very limited due to the well field remote location.
- Pick up after your pets.
- If you have your own septic system, properly maintain your system to reduce leaching to water sources or consider connecting to a public water system.
- Dispose of chemicals properly; take used motor oil to a recycling center.
- Volunteer in your community. Find a watershed or wellhead protection organization in your community and volunteer to help. If there are no active groups, consider starting one. Use EPA's Adopt Your Watershed to locate groups in your community or visit the Watershed Information Network's How to Start a Watershed Team.
- Organize a storm drain stenciling project with your local government or water supplier. Stencil a message next to the street drain reminding people "Dump No Waste Drains to River" or "Protect Your Water." Produce and distribute a flyer for households to remind residents that storm drains dump directly into your local water body.

Monitoring and reporting of compliance data violations

There was one (1) compliance violation during the year 2022. The violation was for not monitoring for Lead and Copper between the months of June and September 2022, a time frame set forth by EPA regulation. How every, the Town of Saratoga did monitor for these contaminants during the month of October 2022. Those results are presented in this report.

Significant Deficiencies

The Towns last sanitary survey identified that the screen mesh covering the top air vents on both one million - gallon tanks were not equipped with #24 mesh; the vents were screened but not with #24 mesh. The Town replaced the air vent (with #24 mesh screens) atop the welded tank in May 2021. EPA requested modifications to the air vent atop the welded tank in the fall of 2021. These modifications were completed, and the air vent significant deficiency was dropped. The last item identified in the survey was that leaking was present at locations on the bolted tank. The tank was drained and taken out of service in December 2020. The Town evaluated if the tank was necessary for the continued operation of the Towns water system. A decision to take the tank out of service permanently was made in the fall or 2021. The final step in taking the bolted tank our of service will be to physically disconnect the tank feed line from the Towns water system. This was completed in the first quarter of 2022.

Additional Information for Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with

service lines and home plumbing. The Town of Saratoga Wyoming is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epain.gov/safewater/lead. The Town last collected Lead and Copper samples for pre-selected locations in 2022. The Town will next collect lead & copper samples in 2023. Revision to EPA's Lead and Copper Rule will require public water systems to inventory service lines (water main to private homes or businesses) for the presence of lead lines. This inventory will be required to be completed by the Town by September 2024. Residences may see activities associated with this inventory process over the next year.

Additional Information for Arsenic

The Town of Saratoga did sample for Arsenic in December of 2022, as part of the Inorganic compounds. The results show a None Detect. EPA's standard balances the current understanding of arsenic's possible health effects against the costs of removing arsenic from drinking water. EPA continues to research the health effects of low levels of arsenic which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems.

Water Quality Data Table

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of contaminants in water provided by public water systems. The table below lists all the drinking water contaminants that we detected during the calendar year of this report. Although many more contaminants were tested, only those substances listed below were found in your water. All sources of drinking water contain some naturally occurring contaminants. At low levels, these substances are generally not harmful in our drinking water. Removing all contaminants would be extremely expensive, and in most cases, would not provide increased protection of public health. A few naturally occurring minerals may actually improve the taste of drinking water and have nutritional value at low levels. Unless otherwise noted, the data presented in this table is from testing done in the calendar year of the report. The EPA or the State requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not vary significantly from year to year, or the system is not considered vulnerable to this type of contamination. As such, some of our data, though representative, may be more than one year old. In this table you will find terms and abbreviations that might not be familiar to you. To help you better understand these terms, we have provided the definitions below the table. As per EPA's annual monitoring and reporting requirements for the Town, in 2022 IOC's, VOC's, SOC's, Asbestos, Radioactive contaminants and Lead and Cupper samples were collected. Sampling requirements for 2023 are, Disinfection Byproducts, Lead and Copper, and Nitrates. IOC's, VOC's, SOC's will be done 2025, Radionuclides will be done in 2028 and Asbestos in 2031.

| | MCLG or | MCL, TT, or | Detect In Your | Ra | nge | Sample | | |
|---|------------------------|----------------|----------------------|-----|---------------|-------------------------|-----------|---|
| Contaminants | MRDLG | | | Low | High | | Violation | Typical Source |
| Disinfectants & Disinfection By-Products | | | | | | | | |
| (There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants) | | | | | | | | |
| Haloacetic Acids (HAA5) (ppb) | NA | 60 | 0.85 | NA | NA | 2023 | No | By-product of drinking water chlorination |
| TTHMs [Total Trihalomethanes] (ppb) | NA | 80 | 2.9 | NA | NA | 2023 | No | By-product of drinking water disinfection |
| Inorganic Contaminant | Inorganic Contaminants | | | | | | | |
| Arsenic (ppb) | 0 | 10 | ND | NA | NA | 2022 | No | Erosion of natural deposits; Runoff from orchards; Runoff from glass and electronics production wastes |
| Asbestos (MFL) | 7 | 7 | ND | NA | NA | 2022 | No | Decay of asbestos cement water mains; Erosion of natural deposits |
| Barium (ppm) | 2 | 2 | .2 | NA | NA | 2022 | No | Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits |
| Fluoride (ppm) | 4 | 4 | .6 | NA | NA | 2022 | No | Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories |
| Nitrate [measured as Nitrogen] (ppm) | 10 | 10 | 1.33 | NA | NA | 2023 | No | Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits |
| Microbiological Contam | ninants | | | | | | | |
| Total Coliform (TCR) (positive samples/month) | 0 | 0 | 0 | NA | NA | 2023 | No | Naturally present in the environment |
| Radioactive Contamina | nts | | | | | | | |
| Alpha emitters (pCi/L) | 0 | 15 | -2 | NA | NA | 2022 | No | Erosion of natural deposits, next 2028 |
| Uranium (ug/L) | 0 | 30 | 3 | NA | NA | 2016 | No | Erosion of natural deposits, next 2028 |
| Contaminants | MCL G | AL | Your Water | | ample Date | # Samp Exceedi AL | | ds Typical Source |
| Inorganic Contaminant | S | | | | | | , | |
| Copper - action level at consumer taps (ppm) | 1.3 | 1.3 | 0.05 | 2 | 2022 | 0 | No | Corrosion of household plumbing systems; Erosion of natural deposits |

| Lead - action level at consumer taps (ppb) | 0 | 15 | ND | 2 | 2022 | 0 | No | Next Pb/Cu samples in 2025 |

Undetected Contaminants

The following contaminants were monitored for, but not detected, in your water.

| Contaminants | MCLG or MRDLG | MCL, TT, or MRDL | | Violation | Typical Source |
|------------------------------|---------------------|------------------------|----|-----------|--|
| Antimony (ppb) | 6 | 6 | ND | No | Discharge from petroleum refineries; fire retardants; ceramics; electronics; solder; test addition. |
| Beryllium (ppb) | 4 | 4 | ND | No | Discharge from metal refineries and coal-burning factories; Discharge from electrical, aerospace, and defense industries |
| Cadmium (ppb) | 5 | 5 | ND | No | Corrosion of galvanized pipes; Erosion of natural deposits; Discharge from metal refineries; runoff from waste batteries and paints |
| Chromium (ppb) | 100 | 100 | ND | No | Discharge from steel and pulp mills; Erosion of natural deposits |
| Cyanide (ppb) | 200 | 200 | ND | No | Discharge from plastic and fertilizer factories; Discharge from steel/metal factories |
| Mercury [Inorganic] (ppb) | 2 | 2 | ND | No | Erosion of natural deposits; Discharge from refineries and factories; Runoff from landfills; Runoff from cropland |
| Nickel (ppb) | None | None | ND | N0 | Erosion of natural deposits; Discharge from refineries and factories; Runoff from landfills; Runoff from cropland |
| Selenium (ppb) | 50 | 50 | ND | No | Discharge from petroleum and metal refineries; Erosion of natural deposits; Discharge from mines |
| Thallium (ppb) | .5 | 2 | ND | No | Discharge from electronics, glass, and Leaching from ore- processing sites; drug factories |

| Unit Descriptions | | | | |
|------------------------|--|--|--|--|
| Term | Definition | | | |
| ug/L | ug/L: Number of micrograms of substance in one liter of water | | | |
| Ppm | ppm: parts per million, or milligrams per liter (mg/L) | | | |
| Ppb | ppb: parts per billion, or micrograms per liter (μg/L) | | | |
| pCi/L | pCi/L: picocuries per liter (a measure of radioactivity) | | | |
| MFL | MFL: million fibers per liter, used to measure asbestos concentration | | | |
| positive samples/month | positive samples/month: Number of samples taken monthly that were found to be positive | | | |
| NA | NA: not applicable | | | |
| ND | ND: Not detected | | | |
| NR | NR: Monitoring not required but recommended. | | | |

| Important Drinking Water Definitions | | | |
|--------------------------------------|---|--|--|
| Term | Definition | | |
| MCLG | MCLG: Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety. | | |
| MCL | MCL: Maximum Contaminant Level: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology. | | |
| TT | TT: Treatment Technique: A required process intended to reduce the level of a contaminant in drinking water. | | |
| AL | AL: Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow. | | |
| Variances and Exemptions | Variances and Exemptions: State or EPA permission not to meet an MCL or a treatment technique under certain conditions. | | |

| Important Drinking Water Definitions | | | | |
|--------------------------------------|---|--|--|--|
| MRDLG | MRDLG: Maximum residual disinfection level goal. The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants. | | | |
| MRDL | MRDL: Maximum residual disinfectant level. The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants. | | | |
| MNR | MNR: Monitored Not Regulated | | | |
| MPL | MPL: State Assigned Maximum Permissible Level | | | |
